Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

| F 309 | <p>Continued From page 1 eating - feed as needed."</p> <p>During an observation on 11/14/13 at 8:50 am, Resident #1 was observed in the bed positioned at 35 degrees while being fed by sitter B. The resident was observed with continued coughing, while being fed bacon, toast, milk and coffee through a straw by sitter B. On 11/14/13 at 8:55 am, Resident #1 remained in bed positioned at 35 degrees with continued coughing while being fed by sitter B. Nurse #1 when questioned during an observation from outside the opened door of Resident #1's room regarding the positioning of Resident #1 while eating stated the resident was positioned at 30-45 degrees. She immediately went into the room and informed sitter B that the resident needed to be positioned at 75 degrees or higher while eating. Nurse #1 positioned the resident to 75 degrees by raising the head of the bed.</p> <p>In an interview on 11/14/13 at 9:00 am, private sitter B indicated that she was hired one month ago by the guardian of Resident #1 as a "private sitter." She stated that part of her duties included "feeding Resident #1 because he played with his food and would not eat at times." The sitter added that she obtained the meal tray when the nursing assistants brought the tray in the room to her every morning. She concluded that she had no formal training related to feeding residents.</p> <p>In an interview on 11/14/13 at 9:45 am, the director of nursing (DON) indicated that she had no control over the private sitter, and that she had not assessed or observed if the sitter was capable of safely feeding Resident #1, due to the sitter was not hired by the facility. The DON concluded that her expectation was if the facility</p> | F 309 | <p>On November 15, 2013 and November 16, 2013 the facility provided resident #1 private sitters with training regarding proper feeding techniques including correct positioning of the resident during feeding by the Director of Nursing and Administrative nurses. Any new sitters for Resident #1 will be trained prior to sitting with him on the proper feeding techniques to include correct positioning.</p> <p>On November 15, 2013 the facility completed a 100% audit of other residents with private sitters to identify other residents at risk for the same deficient practice. An in-service regarding proper feeding techniques including proper positioning of residents during feeding was begun with these sitters by the Staff Facilitator on November 15, 2013 and completed on November 18, 2013.</p> <p>The Staff Facilitator (RN) will in-service any new private sitters on the proper feeding process including proper positioning of resident prior to their beginning to work with a resident.</p> <p>An audit tool was begun by the Quality Assurance Nurse and the Director of Nursing on November 18, 2013 to review proper feeding techniques by private sitters to include Resident #1. The Monitoring Audit tool will be completed weekly to ensure proper techniques are being followed.</p> <p>The Director of Nursing and/or the Assistant Director of Nursing will review</p> | | |

She indicated that she recalled the facility informing her that Resident #1 was observed with an abrasion on his buttocks and that she ordered the resident to be seen by an outside surgeon, since he was already being seen for his feet as a precautionary measure. Physician #1 concluded that considering Resident #1's extensive cardiovascular history, bilateral lower leg/feet edema, aortic valve disease and fragile status that she believed the pressure ulcers to the sacral/buttocks area were unavoidable.</p> <p>In an interview on 11/14/13 at 2:02 pm, the treatment nurse, accompanied by the DON when questioned regarding the appearance/shape of the left buttock abrasion when she witnessed it on 9/9/13 stated it was "just an abrasion to the left buttock and a description was not necessary per the facility protocol for abrasion." When further questioned regarding the worsening of the abrasion appearance or surrounding skin tissue, the treatment nurse referred back to the facility's abrasion protocol. She stated she provided treatment as ordered by the physician to the left buttocks and could not provide a physical description of how the left buttock or the surrounding skin integrity appeared on 9/12/13 through 9/22/13. The treatment nurse acknowledged that she performed treatment to the left buttocks "abrasion" on 9/9, 9/10, 9/11, 9/12, 9/13, 9/18, 9/19, 9/20 and 9/23 per the treatment record. She stated that she did not</p> | F 314 | | | |

| F 314 | <p>Continued From page 11</p> <p>observe any changes in the abrasion or other skin concerns until 9/23/13. The treatment nurse acknowledged on 9/23/13 she assessed the following wounds as follow: "1) stage III left buttock measured 3 cm x 3 cm 2) unstageable right buttock measured 4.2 cm x 4.5 cm 3) stage III to coccyx measured 1 cm x 2 cm." She concluded thereafter, she notified the physician and received orders for the resident to be evaluated at the wound clinic.</p> <p>In a follow-up interview on 11/14/13 at 2:32 pm, Nurse #1 when questioned regarding the left buttocks "abrasion" identified by her on 9/9/13 she indicated that she observed a "small, tiny area of the skin that was broken open. I assessed the whole entire buttocks area and did not see any other skin concerns at that time. I documented that it was an abrasion and I believed the resident was in the bed during my observation."</p> <p>In an interview on 11/14/13 at 5:27 pm, NA #3 revealed that she was a floater throughout the facility but worked 3 - 4 days a week with Resident #1 prior to his wound surgery. She added that prior to the surgery and "sores on his bottom" he required the use of the mechanical lift for transferring, was unable to position himself when in the wheelchair, and that most of his time throughout the day was spent in the wheelchair. NA #3 acknowledged that she did not reposition Resident #1 when he was up in the wheelchair because she could not manage his weight. NA #3 concluded that Resident #1 was usually put to bed around 7:30 pm after dinner, and that she did not observe any skin abnormalities during routine care.</p> | F 314 | | | |

| F 314 | <p>Continued From page 12</p> <p>In an interview on 11/14/13 at 5:35 pm, NA #4 stated that she had worked with Resident #1 one - two times a week and that he was usually out of bed up in the wheelchair during the evening hours. NA #4 added that the resident was limited in repositioning himself alone. She explained that the NAs are suppose to reposition the residents every two hours and as needed. She stated that she observed an "abrasion" on his left buttocks, but could not recall the exact date and she reported it to Nurse #1.</p> <p>Nurse #2 who worked on 9/21/13 was not available to be interviewed during the survey, as to why the treatment record was not initialed to reflect that treatment was provided to Resident #1's left buttock.</p> <p>In a telephone call interview on 11/18/13 at 4:50 pm, the surgeon revealed that when he first saw or evaluated Resident #1's pressure ulcer to the sacral area he assessed phase three pressure ulcers to the sacral, meaning that the tissue was "necrotic/dead." He elaborated that Resident #1 was immediately, taken to the operating room and surgery was performed which revealed "necrotic tissue was confirmed all the way to the bone and was surgically removed as such." The surgeon indicated taking into consideration Resident #1's overall health condition that if the resident was turn and repositioned every two hours as needed, that a phase three pressure ulcer probably would not have occurred. He stated that it was not uncommon for a phase II ulcer to develop within 30 min - 1 hour if the pressure is not relieved to the area, even with turning/repositioning every two hours. He concluded that his initial assessment of Resident #1's buttock/sacral/coccyx area revealed</p> | F 314 | | | |
