

NC Department of Health and Human Services
NC Nurse Aide I Curriculum

Module H
Body Systems
July 2019

Objectives (1)

- Identify the structure and function of the cell and the integumentary, musculoskeletal, nervous, cardiovascular, respiratory, digestive, urinary, reproductive, endocrine, and immune systems
- Describe the nurse aide's role in the provision of care for a resident with cancer

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 2

Objectives (2)

- Discuss changes in the integumentary, musculoskeletal, nervous, cardiovascular, respiratory, digestive, urinary, reproductive, endocrine, and immune systems due to aging
- Compare and contrast normal findings and variation of normal findings of the integumentary, musculoskeletal, nervous, cardiovascular, respiratory, digestive, urinary, reproductive, endocrine, and immune systems

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 3

Objectives (3)

- Describe common disorders of the integumentary, musculoskeletal, nervous, cardiovascular, respiratory, digestive, urinary, reproductive, endocrine, and immune systems
- Describe the nurse aide's role related to a resident's integumentary, musculoskeletal, nervous, cardiovascular, respiratory, digestive, urinary, reproductive, endocrine, and immune systems

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

4

Module H Body Systems Cell Theory

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

5

Cell Theory – Overview

- Basic unit of all living tissues or organisms
- All living organisms made of cells
- Cellular function is essential process of living things
- Cells have several functioning structures called organelles, that carry on work of cell

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

6

Cells – Structure and Function

- Building blocks of the human body
- Have same basic structure; function, size, and shape may differ
- Need food, water, and oxygen to live and function
- Microscopic in size
- Divide, grow, and die
- Combine to form tissue

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

7

Tissue – Structure and Function

- Carry out a particular activity or function
- Types – epithelial, connective, muscle, nerve
- Grouped together to form organs

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

8

Organ – Structure and Function

- Made of tissue, may be several types of tissues
- Carries on a special function; examples are heart, stomach, bladder
- Some are paired; examples are kidneys, lungs
- Combine to form a system

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

9

System – Structure and Function

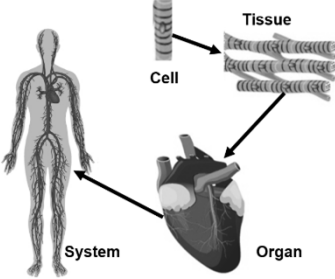

- Made of groups of several organs functioning together for a specific purpose or purposes
- Combine to form an organism
- Examples of systems?

Circulatory System

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

10

Cell

Tissue

Organ

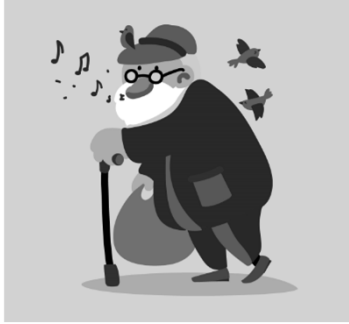

System

In Summary, Organization of the Body

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

11

Organism – Structure and Function

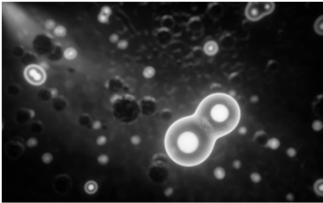

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

12

Cells – Normal Findings

Reproduce for tissue growth and repair in a controlled and orderly manner

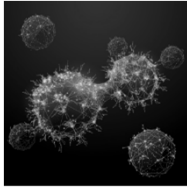

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 13

Cells – Variation of Normal

Tumor – group of abnormally growing cells; may be benign or malignant

Cancer (CA)

- Abnormal cells grow in uncontrolled manner, invade surrounding tissue; may spread to other areas
- Can occur almost anywhere in or on body; commonly occurs on skin, in lung, colon, breast, prostate, uterus, ovary, bladder, and kidney

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 14

Cancer – Risk Factors (1)

Second largest cause of death

- Age** – getting older most important risk factor
- Tobacco** – actual use and second-hand
- Radiation** – sunlight,
- Infections** – certain viruses and bacteria

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 15

Cancer – Risk Factors (2)

Immuno-suppressive drugs
Alcohol
Diet – high in fat, protein, calories, and red meat

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 16

Cancer – Risk factors (3)

Hormones – female hormones
Obesity
Environment – air pollution, second-hand smoke, and asbestos

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 17

Cancer – Warning Signs (CAUTION)

- Change in bowel or bladder habits
- A sore that does not heal
- Unusual bleeding or discharge from any body opening
- Thickening or lump in breast or elsewhere
- Indigestion or difficulty swallowing
- Obvious change in a wart or mole
- Nagging cough or hoarseness

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 18

Cancer Treatment

Goals – cure, control, reduce signs and symptoms from disease and treatment

Key is to find cancer early
Dependent on type, site, size, and if it has spread

Includes – surgery, radiation, chemotherapy, others (hormone, stem cell transplants, alternative)

Cancer – Radiation Therapy (1)

Kills cancer cells using X-ray beams aimed at tumor or radioactive material implanted at or near tumor

Cancer – Radiation Therapy (2)

Side Effects

- **At site – sore, irritated, redness, blistering**
- **Head and neck – dry mouth, sore throat**
- **Tiredness**
- **Discomfort, nausea, vomiting, diarrhea, loss of appetite**

Nurse aide care directed at minimizing side effects and providing emotional support

Cancer – Chemotherapy (1)

- Affects whole body; both cancer cells and normal cells
- Targeted therapy can tell the difference
- May be given orally or intravenously,
- Be aware of safety needs handling body fluids

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 22

Cancer – Chemotherapy

Side Effects
(depend on drug(s) used)

- Hair loss
- Digestive disturbances
- Stomatitis
- Decreased blood cell production
- Changes in thinking and memory
- Emotional changes

Nurse aide care directed at minimizing side effects and providing emotional support

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 23

Cancer – Nurse Aide's Role

Resident's needs include:

- Pain relief or control
- Balance of rest and exercise
- Fluids and nutrition
- Prevention of skin breakdown
- Prevention of bowel problems
- Dealing with side effects of treatment
- Psychologic and social needs
- Spiritual needs

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 24

Cancer – Nurse Aide’s Role (1)

- Understand that each resident is different
- Social interaction
- Proper nutrition
- Pain control
- Assist with comfort and circulation
- Skin care
- Mouth care

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

25

Cancer – Nurse Aide’s Role (2)

Observe for and report to the nurse the following:

- Increased weakness, fatigue, fainting
- Nausea, vomiting, diarrhea
- Change in appetite weight loss
- Depression, confusion, change in mental state
- Blood in mouth, urine, or bowel movement
- Changes in skin, new lumps, sores, rash
- Increase in pain or pain that is not relieved by medication

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

26

Cancer – Nurse Aide’s Role (3)

Self-image – may be an issue; hair loss common side effect

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

27

Nurse Aide's Role

Visitors and family – if visit is positive one, do not intrude; watch for and report negative interactions to the nurse during visits

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

28

Module H Body Systems Integumentary

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

29

Integumentary – Overview

- The skin
- Largest organ and system in the body
- Has accessory structures – hair and nails
- Responsible for providing a natural protective covering of the body

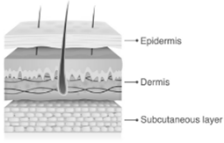

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

30

Integumentary – Structure

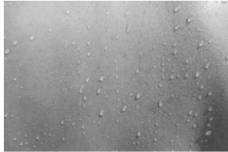

- **Epidermis**
 - Outer layer
 - Living and dead cells
 - No blood vessels, only few nerve cells
- **Dermis**
 - Inner layer
 - Made up of connective tissue
 - Has blood vessels, nerves, sweat glands, oil glands, and hair roots
- **Subcutaneous (fatty) tissue – thick layer of fat and connective tissue**

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 31

Integumentary – Function

- Protects body from injury and pathogens
- Regulates body temperature
- Eliminates waste
- Contains nerve endings for cold, heat, pain, pressure and pleasure
- Stores fat and vitamins

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 32

Integumentary – Normal Findings

- Warm, dry
- Absence of breaks, rash, discoloration, swelling

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 33

Integumentary – Changes Due to Aging

- Skin is thinner, drier, more fragile
- Loses elasticity
- Fatty layer decreases; person feels colder
- Hair thins and may gray

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

34

Integumentary – Changes Due to Aging (1)

- Folds, lines, wrinkles and brown spots may appear
- Nails harden and become more brittle
- Reduced circulation to skin, leading to dryness and itching
- Development of skin tags, warts and moles

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

35

Integumentary – Variation of Normal

- Breaks in skin
- Pale, white or reddened areas
- Black and blue areas
- Changes in scalp or hair

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

36

Integumentary – Variation of Normal (1)

- Rash, itching or skin discoloration
- Abnormal temperature
- Swelling

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 37

Integumentary – Variation of Normal (2)

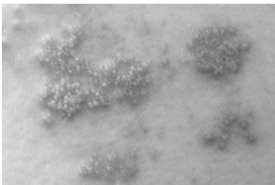

- Ulcers, sores, or lesions
- Swelling
- Dry or flaking skin
- Fluid or bloody drainage

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 38

Shingles (Herpes Zoster)

- Caused by virus
- Rash or blisters on one side of body, burning pain, numbness, and itching; lasts about 3 to 5 weeks
- Infectious until lesions are crusty

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 39

Stasis Dermatitis

Skin condition affecting lower legs and ankles; occurs from buildup of fluid under skin; problems with circulation resulting in fragile skin; can lead to open ulcers and wounds

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 40

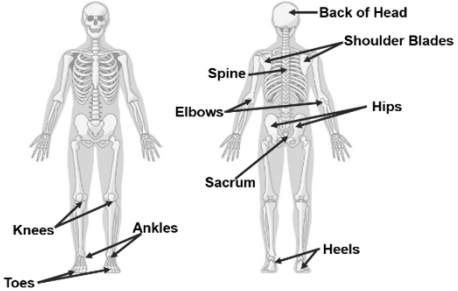

The Pressure Injury

- Any lesion caused by unrelieved pressure that results in damage to underlying tissues; friction and shear are factors
- Many pressure injuries occur within first 4 weeks of admission to the facility

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 41

Bony Prominences

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 42

Pressure Injury – Terms

Shear – when layers of skin rub up against each other; or it could be when skin remains in place, but tissues underneath move and stretch

Friction – rubbing of one surface against another

Unavoidable pressure injury – a pressure injury occurs despite efforts to prevent one

Avoidable pressure injury – one that develops from improper use of the nursing process

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

43

Pressure Injury – At Risk

- Risk factors – immobility, breaks in skin, poor circulation to area, moisture, dry skin, and urine and feces irritation
- Older residents and disabled residents are at risk due to skin changes

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

44

Pressure Injuries – Residents at Risk

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

45

Pressure Injury – Stages

The diagram illustrates the four stages of pressure injury on a cross-section of skin layers: skin, fat, muscle, and bone. Stage 1 shows non-blanchable redness of the skin. Stage 2 shows a partial-thickness loss of the epidermis. Stage 3 shows a full-thickness loss of the epidermis and part of the dermis. Stage 4 shows a full-thickness loss of the epidermis, dermis, and subcutaneous tissue, extending down to the muscle and bone.

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 46

Pressure Injury – Pressure Points

Occur over bony areas; include back of head, ears, shoulder blades, hips, spine, sacrum, knees, ankles, and heels

The diagram shows a human skeleton with arrows pointing to various pressure points: Ears, Back of Head, Shoulder Blades, Spine, Elbows, Hips, Sacrum, Heels, Knees, Ankles, and Toes.

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 47

Pressure Injury – Sites

- Objects can contribute to pressure injury – eye glasses, oxygen tubing, tubes, casts, braces
- Obese people can have pressure areas occur where skin is in contact with skin

The image shows a person wearing glasses and oxygen tubing, illustrating potential sites for pressure injury.

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 48

Pressure Injury – Prevention is the Key

- Identify residents at risk
- Measures directed at 1) handling, moving, and positioning of the resident and 2) providing skin care

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

48

Handling, Moving, and Positioning

- Follow repositioning schedule
- Use assistive devices (pillows, foam wedges); support feet properly
- Do not position on red area, pressure injury, on tubes or other medical devices
- Prevent bed friction
- Prevent shearing
- Keep feet and heels off bed

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

50

The 30° Lateral Position

- Bed is not raised more than 30°
- Pillows are placed under head, shoulder, and leg
- Position lifts up the hip to avoid pressure on the hip at about a 30° angle
- Person does not lie on hip as with the side-lying position

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

51

Providing Skin Care

- Inspect skin
- Do not use hot water; use cleansing agent
- Prevent incontinence
- Check for drainage
- Apply moisturizer
- Give a back rub when repositioning
- Keep linen clean, dry, and free of wrinkles
- Avoid scrubbing vigorously
- No heat directly on pressure injury

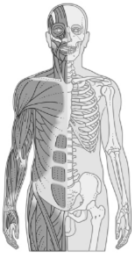

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 52

**Module H Body Systems
Musculoskeletal**

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 53

Musculoskeletal – Overview

Provides structure and movement for the body
Protects and gives the body shape

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 54

Muscles – Structure

Over 600 muscles made up of elastic tissue
Some connected to bones by tendons

Cardiac muscle

Skeletal muscle

Smooth muscle

Involuntary – cannot be controlled

- Cardiac – in the heart; striated
- Smooth – control action of organs; smooth

Voluntary can be controlled

- Skeletal – attached to the bones; arms and legs; striated

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 55

Muscles – Function

Power movement of skeleton
Give body form (or posture)
Produce most of body heat, through contraction

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 56

Skeleton and Bones – Structure

The Skeleton

- Has 206 bones
- Framework of the body

Bones

- Outside is hard and rigid
- Covered with periosteum,
- Bone marrow, located inside; soft and spongy
- Connected to other bones by ligaments
- Connected to muscles by tendons

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 57

Skeleton and Bones – Function

The skeleton

- Provides framework for body
- Protects organs

Bones

- Allow body to move
- Store calcium
- Make and store blood cells (in bone marrow)

Joints – Structure

- Point where bones meet; made up of cartilage
- Synovial membrane lines joints
- May be movable, slightly movable, or immovable
- Ligaments hold bones together
- Types – ball-and-socket, hinge, and pivot

Types of Joints

Pivot Joint

Ball-and-socket Joint

Hinge Joint

Musculoskeletal – Normal Findings (1)

- Ability to perform routine movements and activities of daily living
- Ability to perform full range of motion exercises bilaterally, without pain

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

61

Musculoskeletal – Normal Findings (2)

Abduction of the arms bilaterally without pain

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

62

Musculoskeletal – Normal Findings (3)

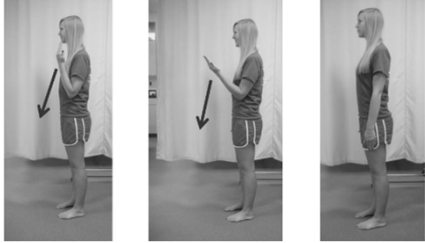

Adduction of the arms bilaterally without pain

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

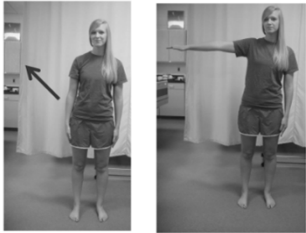

63

Musculoskeletal – Normal Findings (4)
Extension of arm bilaterally without pain

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 64

Musculoskeletal – Normal Findings (5)
Flexion of arm bilaterally without pain

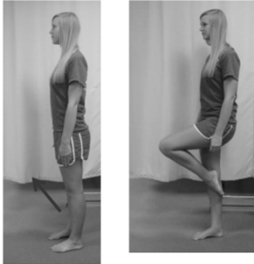

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 65

Musculoskeletal – Normal Findings (6)
Extension of leg bilaterally without pain

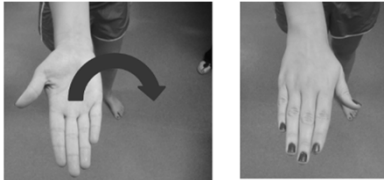

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 66

Musculoskeletal – Normal Findings (7)
Flexion of leg bilaterally without pain

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 67

Musculoskeletal – Normal Findings (8)
Pronation bilaterally without pain

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 68

Musculoskeletal – Normal Findings (9)
Supination bilaterally without pain

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 69

Musculoskeletal – Normal Findings (10)
Dorsiflexion bilaterally without pain

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 70

Musculoskeletal – Normal Findings (11)
Plantar flexion bilaterally without pain

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 71

Musculoskeletal – Normal Findings (12)
Opposition bilaterally without pain

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 72

Musculoskeletal – Changes Due to Aging (1)

- Muscles weaken and lose tone
- Bones lose density and become brittle
- Slower muscle and nerve interaction

Joint stiffening; become less flexible and become painful

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 73

Musculoskeletal – Changes Due to Aging (2)

- Height decreases from 1 to 2 inches
- Slowed recovery from position changes and sudden movement
- Pain when moving
- Reaction time, movement speed, agility, and endurance decrease
- Poorer response to stimuli

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 74

Musculoskeletal – Variation of Normal (1)

- History of falls
- Difficulty with holding or lifting objects
- Loss of muscle strength and tone
- Generalized weakness and tiredness
- Bruising
- Slow and unsteady body movement

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 75

Musculoskeletal – Variation of Normal (2)

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 76

Arthritis
Inflammation or swelling of the joints; causes stiffness, pain, and decreased mobility; two common types

Osteoarthritis – elderly; may occur with aging or joint injury; usually weight-bearing hips and knees involved

Rheumatoid arthritis – any age; starting with smaller joints then progressing to larger ones

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 77

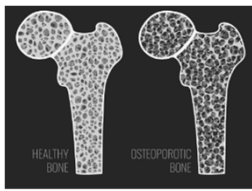

Arthritis – Nurse Aide’s Role

ASSISTIVE TECHNOLOGY

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 78

Osteoporosis

HEALTHY BONE OSTEOPOROTIC BONE

Bones lose density causing them to become porous and brittle; bones break easily; has low back pain, stooped posture, becoming shorter, and broken bones

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 79

Fracture

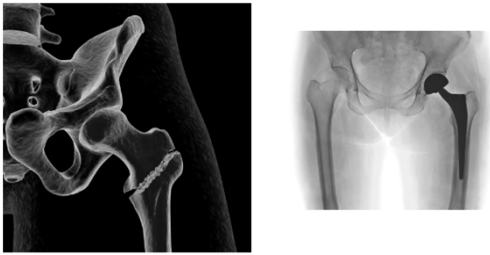

Broken bone caused by an accident or osteoporosis; closed or open break; most common – fractures of arms, wrists, elbows, legs and hips

Goal: to put bone back in alignment so it can heal; bone tissue grows and fuses area together, but must be allowed to do so by not moving area

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 80

Hip Fracture

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 81

Total Knee Replacement (TKR)

Replacement of knee with a prosthesis; performed to relieve pain and restore mobility damaged by arthritis or injury

Goals – prevent blood clots, special stockings and machines used; speed up recovery, decrease stiffness, increase range of motion

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

82

Amputation

Surgical removal of some or all of a body part; occurs – arm, hand, leg, foot; causes: disease or accident

- Assist with activities of daily living
- Provide support if phantom statements made; do not argue
- Assist with position changes and range of motion exercises
- Follow care plan in regards to prosthetic care

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

83

Contracture and Muscle Atrophy

Contracture – muscle or tendon shortens, freezes, becomes inflexible; permanent disability

Muscle atrophy – muscle wastes away, decreases in size; becomes weak, from disuse

Prevention of these two conditions critical

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

84

Musculoskeletal System

Nurse Aide's Role

Prevention, Prevention, Prevention!

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 85

Module H Body Systems

Nervous System

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 86

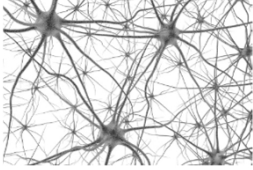

Nervous – Overview

- Controls and coordinates all body functions
- Reflex centers for heartbeat and breathing
- Senses and interprets information and responds to changes

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 87

Nervous – Overview (1)

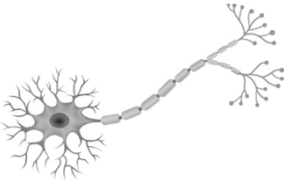

Consists of two main divisions

1. Central nervous system (CNS) – brain and spinal cord
2. Peripheral nervous system – includes nerves that travel throughout the body

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 88

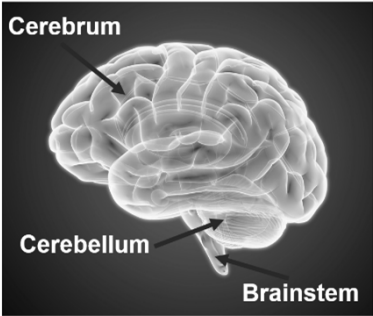

The Neuron (Nerve Cell)

Basic unit of nerves and the nervous system
Carries messages or impulses through spinal cord to and from the brain

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 89

The Brain – Structure and Function

Cerebrum

Cerebellum

Brainstem

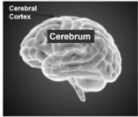

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 90

Brain – The Cerebrum

Divided into right and left hemispheres

- Right hemisphere controls movement and function of left side
- Left hemisphere controls movement and function of right side
- Any illness or injury to right hemisphere affects function of left side; any illness or injury to left hemisphere affects function of right side

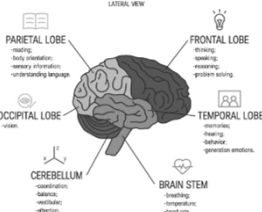

Cerebral cortex – outer layer; ideas, thinking, analysis, judgment, emotions, memory occurs, guides speech, interprets messages from senses, controls voluntary muscle movement

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 91

Brain – The Cerebrum

Each side of your brain contains four lobes

FRONTAL LOBE

- thinking
- reasoning
- planning
- problem solving

TEMPORAL LOBE

- hearing
- learning
- behavior
- generation emotions

PARIETAL LOBE

- reading
- touch sensation
- sensory information
- understanding language

OCCIPITAL LOBE

- vision

CEREBELLUM

- coordination
- balance
- reflexes
- attention

BRAIN STEM

- breathing
- temperature
- heart rate

Frontal

Temporal

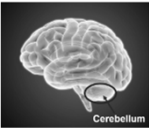

Parietal

Occipital

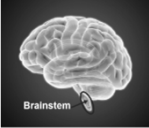

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 92

The Brain

Cerebellum
Controls balance and regulates voluntary muscles
Produces and coordinates smooth movements

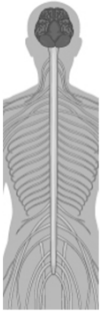

Brain Stem
Regulatory center
Controls heart rate, breathing, swallowing, opening/closing blood vessels

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 93

Spinal Cord and Sensory Organs

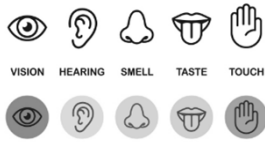

Spinal Cord
 Located within the spine
 Connected to the brain
 Conducts messages between the brain and the body by pathways

Sensory Organs
 Include skin, tongue, nose, eyes, and ears
 Receive impulses from environment and relay impulses to brain

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 84

Nervous – Normal Findings

- Alert and oriented, with clear short-term/ long-term memory
- Sensory function intact
- Ability to sense heat, cold, pain
- Straight gait; coordination of limbs
- Reflexes present

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 85

Nervous – Changes in Aging

- Some hearing loss
- Appetite decreases
- Less tear production
- Vision decreases
- Problems seeing blue and green
- Pupils less responsive to light
- Changes in memory; most likely with short-term memory

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 86

Nervous – Changes in Aging

- Loss of nerve/brain cells
- Decreased sensitivity to heat and cold
- Slowed response and reflex time
- Reduced sense of touch
- Reduced sensitivity to pain
- Reduced blood flow to brain
- Forgetfulness
- Decreased function in senses

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

97

Nervous – Variation in Normal

- Changes in speech, vision, or hearing
- Loss of feeling or inability to move one side of body
- Numbness, dizziness, nausea
- Jerking motions or tremors
- Changes in gait or movement
- Paralysis
- Seizures
- Confusion

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

98

Stroke (CVA, Cerebrovascular Accident)

- Caused when (1) a blood vessel leaks or breaks in the brain; or (2) when oxygen to an area is disrupted the blood supply to part of the brain is blocked

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

99

Stroke

Cerebrum is divided into right and left sides: right controls left; left controls right
Each side contains four lobes

Area of brain and size of the area affected by injury will impact severity, signs and symptoms, extent of disability, and prognosis

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 100

After the Stroke, Resident May Experience

- Hemiplegia
- Hemiparesis
- Expressive aphasia
- Receptive aphasia
- Emotional lability
- Loss of sensations
- Loss of bowel and bladder control
- Cognitive impairment
- Dysphagia

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 101

Stroke – Nurse Aide’s Role

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 102

Parkinson's Disease

- Progressive, incurable disease causes a part of the brain to degenerate
- Nurse aide's role – protect resident, assist with ambulation, assist with activities of daily living and assist resident with self-care

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

103

Head and Spinal Cord Injuries

Diving accidents, sports injuries, motor vehicle accidents, and war injuries; injuries range from mild concussion to coma, paralysis, and death

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

104

Head and Spinal Cord Injuries (1)

- Head injuries may cause permanent brain damage; disabilities related to part of brain injured
- Severity of spinal cord injuries depend on level and force of injury in regards to spinal cord; higher the injury, greater the loss of function

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

105

Head and Spinal Cord Injuries (2)

Nurse aide's role: provide emotional support and realize that the resident may exhibit feelings of anger and frustration

Module H Body Systems Cardiovascular

Cardiovascular System

- Also called the circulatory system
- The continuous movement of blood through the body

Cardiovascular – Changes Due to Aging

- Heart muscle less efficient
- Blood pumps with less force
- Arteries lose elasticity and become narrow
- Blood pressure increases

186
98

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

109

Cardiovascular – Variation of Normal (1)

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

110

Cardiovascular – Variation of Normal (2)

- Swelling of hands and feet
- Pale or bluish lips, hands, or feet
- Weakness and tiredness
- Weight gain

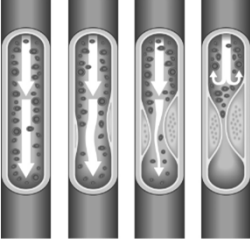

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

111

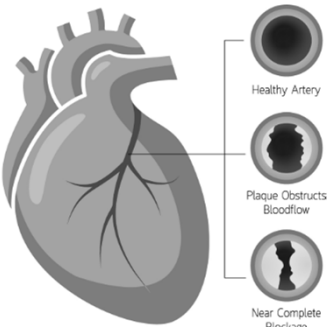

Hypertension (High Blood Pressure)

- Major cause is atherosclerosis or “hardening of the arteries”
- Arteries harden due to plaque build-up from fatty deposits
- May complain of headache, blurred vision, and dizziness

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 112

Coronary Artery Disease (CAD)

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 113

Angina Pectoris (Angina)

Occurs when heart muscle is not getting enough oxygen

Chest pain, tightness of chest, pain radiating up the jaw, down the left arm, may sweat and get short of breath

Exercise, stress, excitement, digesting a big meal require additional oxygen; with CAD, the narrowed blood vessels keep heart muscle from getting enough oxygen

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 114

Myocardial Infarction (MI, Heart Attack)

An emergency when all or part of the blood flow to the heart muscle is blocked and oxygen and nutrients cannot reach cells in the area

Waste products are not removed; muscle cells in the area die
Area may be small or large
If resident survives, cardiac rehabilitation is ordered

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 115

Peripheral Vascular Disease (PVD)

Poor circulation of legs, feet, arms, hands due to fatty deposits that harden in blood vessels

- Signs – nail beds and feet pale or blue, swelling in hands and feet, ulcers of legs and feet, pain while walking
- Follow care plan directive regarding elastic stockings

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 116

Congestive Heart Failure (CHF)

When one or both sides of heart stop pumping blood effectively; all the conditions can cause severe damage to the heart muscle, resulting in heart not being able to pump effectively

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 117

Cardiovascular System – Nurse Aide’s Role

- Monitor vital signs, report abnormal values
- Assist with special diet needs; measure I&O
- Provide rest periods
- Report complaints of chest pain immediately
- Reduce stressful situations

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 118

**Module H Body Systems
Respiratory**

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 119

Respiratory – Structure and Function

3 Regions

- Thorax
- Upper Respiratory Tract
- Lower Respiratory Tract

Function
Involves the breathing in of oxygen (inspiration) and the breathing out of carbon dioxide (expiration)

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 120

Respiratory – Changes Due to Aging

- Respiratory muscles weaken
- Lung tissue becomes less elastic
- Shortness of breath with exertion
- Lung capacity decreases
- Oxygen in blood decreases
- Muscles of diaphragm become weaker
- Limited expansion of chest

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

121

Respiratory – Variation of Normal (1)

- Shallow breathing or breathing through pursed lips
- Coughing or wheezing
- Nasal congestion or discharge
- Productive cough
- Noisy respirations; gasping for breaths

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

122

Respiratory – Variation of Normal (2)

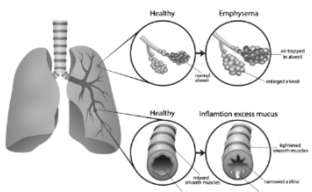

- Cyanosis – changes in skin color, pale or bluish color of lips and extremities
- Dyspnea – difficulty breathing
- Changes in rate and rhythm of breathing
- Need to sit after mild exertion
- Pain in chest

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

123

Chronic Obstructive Pulmonary Disease

COPD; chronic, progressive disease causing trouble breathing, particularly getting air out of lungs

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 124

COPD

Residents with chronic lung disease may live in constant fear of not being able to breathe causing them to sit upright in attempt to improve lung expansion

Residents feel out of control; fear suffocation

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 125

Lung of Smoker With COPD

COPD Signs

- Chronic cough or wheeze
- Difficulty breathing
- Shortness of breath with exertion
- Pale cyanotic reddish-purple skin
- Confusion
- Weakness
- Difficulty in finishing meal
- Fear and anxiety

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 126

COPD – Nurse Aide’s Role

- Help sit up or lean forward supported with pillows
- Offer fluids and small, frequent meals
- Support pursed-lip breathing
- Observe oxygen in use (**NEVER** adjust)
- Be supportive of fears
- Follow infection prevention principles
- Encourage rest periods

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 127

COPD Resident Report to Nurse

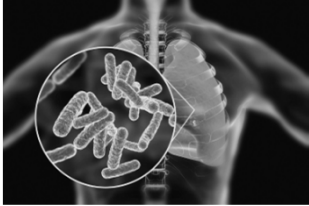

- Signs/symptoms of colds or illness
- Changes in breathing, lung secretions
- Changes in mental state
- Excessive weight gain
- Increasing dependency on staff and family

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 128

Pneumonia

Acute infection of lung or lungs caused by bacteria, virus, or fungus

Resident with COPD at great risk for developing pneumonia, especially if weakened

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 129

A Person With Asthma

Healthy (the blue one) and unhealthy (the red one) bronchial tubes; unhealthy one results in a constricted breathing problem

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

130

Asthma

- Chronic inflammatory disease, occurs when respiratory system is hyperreactive to irritants
- When bronchi become irritated, they constrict, making it difficult to breathe
- Responding to irritation and inflammation, mucus membranes produce thick mucus further inhibiting breathing
- Air is trapped in lungs causing coughing and wheezing

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

131

Upper Respiratory Infection (Cold)

- Viral or bacterial infection of nose, sinuses, and throat
- Signs – nasal drainage, sneezing, sore throat, fever, and tiredness
- Remedy – body's immune system, fluids, and rest

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

132

Respiratory System – Nurse Aide’s Role

- Provide rest periods at intervals
- Encourage exercise and regular movement
- Encourage and assist with deep breathing exercises
- Limit exposure to smoke, polluted air, or noxious odors by residents with respiratory conditions
- Position residents in a manner to maximize lung expansion

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

133

Module H Body Systems Digestive

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

134

Digestive System – Overview

Also known as the gastrointestinal system and abbreviated as GI system

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

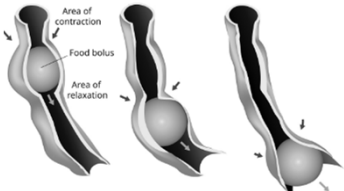

135

Digestive – Structure and Function

- Upper GI structures – mouth, pharynx, esophagus and stomach
- Lower GI structures – small intestines and large intestines
- Accessory structures include teeth, tongue, salivary glands, liver, gall bladder, and pancreas
- GI System digests food, absorbs nutrients, and eliminates waste

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 136

Peristalsis

Involuntary contractions that move food through digestive system

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 137

Bowel Movement (BM)

- Feces or stool
- Involves the movement of feces from the large intestines out of the body through the anus
- Semi-solid material made of water, solid waste, bacteria, and mucus

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 138

Digestive – Normal Findings

- Adequate intake of a well-balanced diet, with fluids
- Passage of a brown, soft, formed, tubular shaped stool (feces), without pain
- Flat abdomen with active bowel sounds

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

139

Digestive – Changes Due to Aging (1)

- Decreased taste buds
- Slowing of peristalsis
- Slower absorption of nutrients
- Loss of bowel muscle tone
- Loss of sphincter muscle tone
- Digestion takes longer and less efficient
- Thinning of stomach lining

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

140

Digestive – Changes Due to Aging (2)

- Decrease in saliva
- Decrease in amount of digestive enzymes
- Decrease in appetite
- Loss of teeth
- Altered taste and smell
- Proteins, vitamins, and minerals not absorbed as well

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

141

Digestive – Variation of Normal (1)

- Difficulty swallowing or chewing
- Poor intake of diet and fluids
- Weight gain or loss
- Loss of appetite
- Abdominal pain and cramping
- Blood, pus, mucus, or other discharge in stool

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

142

Digestive – Variation of Normal (2)

- Nausea and vomiting
- Heartburn
- Diarrhea or constipation
- Pain when having a bowel movement
- Whitish, black, or red colored stool
- Incontinence

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

143

Gastric Ulcer and Gastritis

- Gastric (peptic) ulcers – raw sores in stomach caused by excessive acid secretion; can cause bleeding
- Gastritis – inflammation of the lining of the stomach

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

144

Ulcerative Colitis

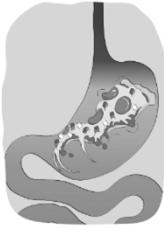

- Chronic inflammatory disease of large intestine
- Serious condition that can result in a colostomy

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 145

Gastroesophageal Reflux Disease

- GERD; contents of stomach back up into esophagus; can damage lining of esophagus
- Heartburn most common symptom
- Nurse aide's role – evening meal eaten 3 to 4 hours before bedtime; remain upright 2 to 3 hours after eating; provide extra pillows

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 146

Constipation

- Occurs when stool moves too slowly through the intestine;
- Signs – abdominal swelling, gas, irritability, and verbalizing of resident that no recent bowel movement;
- Cause – can result from decreased fluid intake, poor diet, inactivity, medications, aging, certain diseases, or not taking the time to have a bowel movement

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 147

Fecal Impaction

- Hard stool stuck in the rectum and cannot be expelled, resulting in ongoing constipation;
- Signs – no stool for several days, oozing of liquid stool, cramping, abdominal distention (swelling), and pain in rectum
- Nurse aides are not allowed to remove fecal impactions

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

148

Enema

Specific amount of water that may or may not have an additive and is inserted into the colon to stimulate passage of stool

Doctor will write order for type and amount of fluid; four different types

- Tap water
- Soapsuds
- Saline
- Commercially prepared

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

149

Digestive – Nurse Aide’s Role

- Make sure dentures are in place
- Observe for choking
- Provide fluids with meals
- Keep clean and dry
- Provide privacy and do not rush
- Encourage intake of fiber and fluids
- Regular physical activity
- Bowel habits for each resident is individual and personal
- Facilitate ideal position for elimination

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

150

Module H Body Systems
Urinary

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 151

Urinary – Overview

- Filtering system of the body
- Responsible for ridding body of waste products from blood

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 152

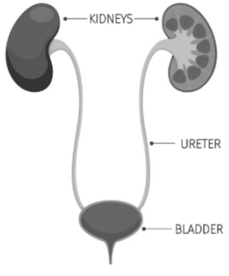

Kidneys – Structure and Function

- Bean-shaped paired organs
- Located at back of abdominal cavity, slightly above waist
- About four or five inches long; an inch thick
- Filters waste and produces urine
- Help maintain water balance and blood pressure
- Regulate electrolytes

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 153

Ureters and Bladder – Structure and Function

Ureters

- Narrow tubes
- Connect kidneys to urinary bladder
- About a foot long

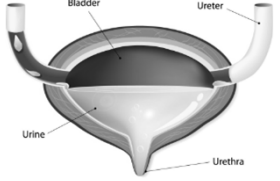

Urinary bladder

- Muscular sac
- Stores urine until it passes

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 154

Urethra – Structure and Function

- A tube located between urinary bladder to the outside
- About seven or eight inches long in males
- About one and a half inches long in females

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 155

Urethra – Male Versus Female

Think about the anatomy of the female urethra and the male urethra in terms of length

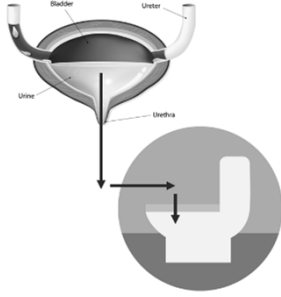

Note the difference between one and a half inches (female urethra) versus seven/eight inches (male urethra) and how the male and female genitalia differ

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 156

Urination and Urine

The passing of urine from the bladder through the urethra to the outside of the body is called urination or micturition or voiding

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 157

Urine – Normal Findings

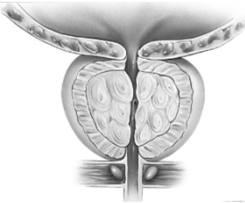

Light yellow to amber in color
Clear
About 1000 to 1500 milliliters per day

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 158

Urinary – Changes Due to Aging

- **Decreased**
 - Kidney size and ability to filter blood
 - Capacity, elasticity, muscle tone of bladder
 - Ability to concentrate urine
- **Difficulty or incomplete emptying of urinary bladder**
- **Enlargement of prostate in males**

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 159

Urinary – Variation of Normal

- Changes in urine
- Weight loss or gain
- Swelling in arms or legs
- Dysuria
- Swelling in bladder or abdomen
- Pain in kidney or back
- Incontinence
- Fever

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 160

Urinary Tract Infection

- An infection of urethra, bladder, ureter, or kidney typically caused by E. coli, a bacteria found in the digestive system
- More common in females

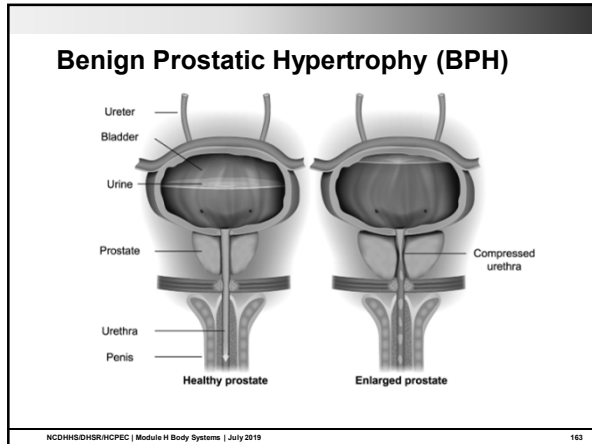

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 161

Kidney Stones (Renal Calculi)

- Form when urine crystallizes in kidneys
- Can block kidneys and ureters causing excruciating pain
- Abdominal or back pain, painful urination, frequent urination, blood in urine, nausea, vomiting, chills, fever
- Strain urine

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 162

Chronic Kidney Disease (CKD)

- Lasting damage of kidneys that worsens gradually; 5 stages; with the latter stages resulting in the need for dialysis
- Can be prevented from advancing into further stages
- Dialysis machine picture on slide

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 164

Urinary Incontinence

Inability to control bladder leading to an involuntary loss of urine; not normal part of aging

Stress Incontinence due to increased abdominal pressure under stress (weak pelvic floor muscles)

Urge Incontinence due to involuntary contraction of the bladder muscles

Overflow Incontinence due to blockage of the urethra

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 165

Urination – Nurse Aide’s Role

- Residents with incontinence must be kept clean and dry
- Provide privacy; should not be rushed or interrupted
- Encourage residents to drink fluids often
- Ideal position for urination for men is standing; for women is a sitting position

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

166

Module H Body Systems Reproductive

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

167

Reproductive System

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

168

Reproductive – Overview

• This system allows human beings to create a new human life; may be subdivided into two categories

- 1) The female reproductive system
- 2) The male reproductive system

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

169

Reproductive – Structure and Function

Responsible for production of reproductive cells, production of hormones responsible for sex characteristics, and reproduction

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

170

Reproductive – Normal Findings

- Absence of bleeding (other than menses) and vaginal discharge/penile discharge
- Absence of pain and itching
- Absence of enlargement of prostate gland

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

171

Reproductive – Changes Due to Aging

- Decreased size and function of reproductive structures
- Enlargement of prostate
- Sagging breasts
- Loss of hair in vulva area
- Weakened muscles that hold female reproductive organs in place

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

172

Reproductive – Variation of Normal

- Bleeding other than menses
- Pain
- Vaginal/penile discharge
- Itching

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

173

Pelvic Organ Prolapse

- Female reproductive organs held in place by muscles and connective tissue; pelvic organs may drop down (prolapse) into vaginal canal
- Cystocele – when bladder drops down (pictured)
- Incontinence may occur
- Nurse aide's role – provide perineal care and report abnormal observations

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019

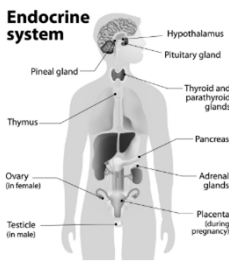

174

Module H Body Systems
Endocrine

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 175

Endocrine – Overview

Endocrine system

- Is a system of glands that secrete chemicals directly into the bloodstream to regulate body functions
- Different types of glands are pictured on slide

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 176

Endocrine – Structure and Function

- Structure – glands located throughout the body that secrete hormones
- Function
 - Maintains homeostasis (balance)
 - Influences growth and development
 - Regulates sugar in the blood and calcium in the bones
 - Regulates reproduction
 - Regulates how fast cells burn food

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 177

Endocrine

Normal findings

- Skin warm/dry
- No variation of weight, appetite, urination from typical
- Awake, alert, oriented

Changes due to aging

- Levels of hormones decrease
- Insulin production decreases
- Body is less capable to deal with stress

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 178

Endocrine – Blurred Vision

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 179

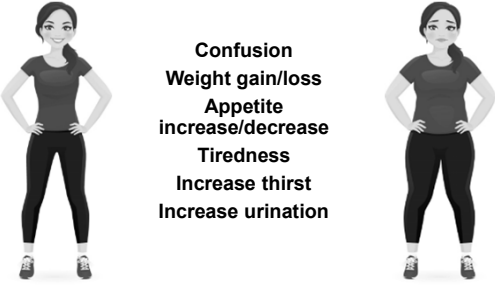

Endocrine – Variation of Normal (1)

- Headache
- Blurred vision
- Dizziness
- Weakness
- Hunger
- Irritability
- Sweating
- Dry skin

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 180

Endocrine – Variation of Normal (2)

- Confusion
- Weight gain/loss
- Appetite increase/decrease
- Tiredness
- Increase thirst
- Increase urination

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 181

Diabetes Mellitus (Diabetes)

- Most common disorder of endocrine system
- Occurs when pancreas produces too little insulin or does not use insulin properly
- Insulin needed for glucose to move from blood into cells; cells need glucose for energy
- Without enough insulin, sugar builds up in blood, causing blood glucose levels to rise

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 182

Diabetes – Three Types

- Type 1 – onset typically during childhood and early adult; pancreas does not produce insulin; lifelong condition; managed with daily doses of insulin, a special diet, and regular blood glucose testing
- Type 2 – develops after about age 35; pancreas secretes insulin, but does not use it well; usually controlled by diet and oral medicine
- 3rd type is gestational diabetes and occurs during pregnancy

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 183

Diabetes – Nurse Aide’s Role

- Ensure meals are served and resident eats his diet, report to nurse if resident refuses meal, observe intake of meal and document
- Encourage resident to follow exercise program
- Observe for signs of low blood sugar (hypoglycemia) and high blood sugar (hyperglycemia); report immediately to nurse
- Provide for foot care as directed and observe for irritation or sores, report immediately to nurse

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 184

Module H Body Systems
Immune

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 185

Immune System

- Defends threats both inside and outside the body
- Structure – antibodies and white blood cells
- Function
 - Protects body from harmful infection-causing germs,
 - Provides immunity from certain diseases
- Changes due to aging
 - Immune system weakens; more prone to getting infections
 - Immune system may attack itself causing disease

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 186

Immune – Variation of Normal

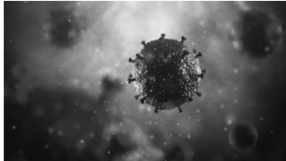

- Signs of infection
 - Anxiety
- Nausea and vomiting
- Stiff, swollen, painful joints

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 187

Acquired Immune Deficiency Syndrome (AIDS) Disease caused by a virus, HIV and attacks the immune system and destroys infection-fighting and cancer-fighting cells of the body

Spread through body fluids including blood, semen, vaginal secretions, and breast milk

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 188

AIDS – Nurse Aide’s Role

- Follow Standard Precautions and Blood Borne Pathogen Standard
- Assist with activities of daily living as needed
- Provide fluids as ordered
- Measure and record I&O and obtain weights
- Encourage deep-breathing and coughing exercises as directed;
- Encourage self-care as tolerated
- Observe for and report signs of infection
- Provide emotional support

NCDHHS/DHSR/HCPEC | Module H Body Systems | July 2019 189

Other Common Disorders

- **Lupus – when immune system attacks tissues causing redness, pain, swelling, and damage**
- **Graves disease – immune system attacks thyroid gland which causes it to secrete more thyroid hormone**
- **Nurse aide’s role**
 - **Observe for and report signs of infection**
 - **Provide for nutrition, hydration, and rest for the resident**
